

Supplementary Table 2. Statistical significance of interaction term between WLB and ERI

	Crude	Model 1 ^a	Model 2 ^b
Men			
WLB × ERI	1.64 (1.10–2.46)	1.54 (1.02–2.30)	1.46 (0.96–2.20)
Women			
WLB × ERI	1.27 (0.89–1.82)	1.32 (0.91–1.91)	1.35 (0.92–1.99)

Values are presented as OR (95% CI).

WLB: work-life balance; ERI: effort-reward imbalance; OR: odds ratio; CI: confidence interval.

^aAdjusted for age and self-rated health status; ^bAdjusted for age, self-rated health status, education, income, occupational type, company size, employment status, shiftwork, night work, 10 hours ≥ working day (/month), stress from work, working hours (/week).
